The sustainability of Victoria's waste infrastructure has been mapped to provide an overview of the region's waste management facilities. The map illustrates the distribution of waste recovery and treatment facilities, including transfer stations, drop-off centers, resource recovery centers, and waste water treatment plants. The boundaries of the different waste management regions are clearly marked, facilitating a comprehensive understanding of the state's waste management landscape.

The map is intended for use by all interested parties, including government agencies, municipalities, and industry stakeholders. The data used to create this map is subject to change, and users are encouraged to consult the latest sources for the most current information.

This map was created by [Resource Recovery Group].
